### AlphaDEX™ Emerging Market Dividend Methodology

1. Begin with all dividend paying securities listed on a major U. S. or Canadian stock exchange that are domiciled in the emerging markets and selected from the countries represented in the S&P/BMI Emerging Markets Index.
2. Rank the stocks using a set of growth and value factors. The growth factors are 3, 6 & 12-month price appreciation, sales to price and 1-year sales growth. The value factors are book value to price, cash flow to price and return on assets.
3. Eliminate bottom 25% of worst scoring stocks
4. Separate the stocks into quintiles based upon their selection score. The top ranked quintile receives a total weight of 5/15 (33.3%) of the portfolio with successive quintiles receiving 4/15 (26.7%), 3/15 (20.0%), 2/15 (13.3%) and 1/15 (6.7%), respectively. Weight each stock equally within its quintile.
5. Reconstitute and rebalance the portfolio semi-annually.
