Investment Objective and Strategy

The fundamental investment objective of **First Trust SMID Cap Rising Dividend Achievers ETF** (the “First Trust ETF”) is to replicate, to the extent possible, the performance of an index of U.S. small and mid cap companies, net of expenses, initially the Nasdaq US Small Mid Cap Rising Dividend Achievers™ Index (the “Index”).

To achieve its investment objective, The First Trust ETF will provide exposure to the Index by holding securities of First Trust SMID Cap Rising Dividend Achievers ETF (the “Underlying Fund”), a U.S.-listed index ETF which is managed by an affiliate of the Manager which seeks to replicate or substantially replicate the performance of the Index. The First Trust ETF will invest in derivative instruments in connection with the hedging of the U.S. dollar currency exposure in respect of the Hedged Units. Investment Performance

For the six-month period ended June 30, 2025, SDVY returned -6.23% compared to the S&P 1000® Index return of -6.53% while SDVY.F returned -1.76% compared to the S&P 1000® Index (USD) total return of -1.29%. Unlike the indices, the First Trust ETF's returns are net of fees and expenses.

Stock selection within the Energy sector detracted from performance. An overweight allocation along with stock selection in Financials also contributed positively to performance.

The Underlying Fund's top five stocks by contribution to return were Curtiss-Wright Corporation, Woodward, Inc., Comfort Systems USA, Inc., Northern Trust Corporation, and Perdoceo Education Corporation. The Underlying Fund's bottom five stocks by contribution to return were Steven Madden, Ltd., SM Energy Company, Robert Half Inc., Winnebago Industries, Inc., and Cactus, Inc.

The U.S. dollar depreciated 5.31% against the Canadian dollar from December 31, 2024, to June 30, 2025. SDVY.F hedges its exposure to the U.S. dollar.

Recent Developments

U.S. small and mid-cap stocks finished the period lower following a volatile first half but rebounded sharply from lows amid optimism the U.S. will reach trade deals with its largest trading partners and the U.S. Federal Reserve will cut interest rates in the year's second half. The S&P 1000® Index returned -1.29% during the period, including dividends. However, the U.S. dollar depreciated sharply relative to the Canadian dollar, meaning the index returned -6.53% over the same period measured in Canadian dollars. The market sold off sharply in April after U.S. President Donald Trump announced wide-ranging tariffs, igniting a global trade war. The selloff briefly sent U.S. small and mid-cap stocks into a bear market. However, the market reversed as tariff tensions eased and inflation trended lower, helping to sustain expectations for rate cuts in the year's second half. So far, the U.S. Federal Reserve has held off on cutting interest rates this year on concerns that tariffs will rekindle inflation. Overall, the S&P 1000® Index finished the period trading at a 16.6 P/E multiple with a 1.61% dividend yield, slightly cheaper than where it stood at the end of 2024. Corporate earnings growth was modest amid small and mid-caps during the period.

(1) Management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period, including the First Trust ETF's proportionate share of the MER of the Underlying Fund in which the First Trust ETF has invested, and is expressed as an annualized percentage of daily average net asset value during the period.

(2) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period. This includes the First Trust ETF's proportionate share of the commissions of Underlying Fund in which the First Trust ETF has invested.

(3) The First Trust ETF's portfolio turnover rate indicates how actively the First Trust ETF's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the First Trust ETF buying and selling all of the securities in its portfolio once in the course of the period. The higher a First Trust ETF's portfolio turnover rate in a period, the greater the trading cost payable by the First Trust ETF in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between high turnover rate and the performance of a First Trust ETF.
