Investment Objective

First Trust Global Risk Managed Income Index ETF seeks to replicate, to the extent possible, the performance of the NASDAQ Global Risk Managed Income CAD TR Index (the "Index"), net of expenses. The investment strategy of the First Trust ETF is to invest in and hold the constituent securities of the Index in the same proportion as they are reflected in the Index or securities intended to replicate the performance of the Index. The Index is a values-based, quantitatively enabled index that seeks to provide exposure to income generating securities within a risk managed framework by investing in exchange traded funds that meet specific criteria and trade on the Toronto Stock Exchange.

Key Features

- Single ticket solution to a portfolio of ETFs that meets index criteria
- Income options listed on the TSX
- Access to a tactical asset allocation model developed by NASDAQ OMX®

NASDAQ Global Risk Managed Income IndexSM Weekly Investment Process

Actual ETFs used in implementing the index may differ from those listed above due to liquidity or cost issues or in order to comply with ETF issuer limits.

*An allocation cap of 25% per security is enforced; remaining capital is moved to a short-term Canadian government bond ETF. The cap ensures that the portfolio does not become concentrated in a single asset and moves the portfolio to short term government bonds when the models deem that there are no attractive investment opportunities.
